MARINE
BREYNAERT

Le vocabulaire de Marine Breynaert est fait de lignes brutes, de pièces industrielles d'usinage, croisées avec des matériaux nobles et le savoir-faire d'artisans d'art. Elle conjugue l'or, le marbre et des pièces métallurgiques dans des compositions lumineuses exigeantes qui empruntent à la fois à l'architecture, au design industriel, au constructivisme et à un certain revival art déco.

Tous les éléments sont sourcés et travaillés Europe, en collaboration avec des métiers d'art spécialisés. Les finitions sont réalisées au studio à Fontainebleau.

Du contraste entre la délicatesse des matières et les lignes brutes de l'industrie, Marine Breynaert a su conjuguer ses différents héritages et autonomiser son style pour décliner des séries cohérentes, puissantes et composées. Ses luminaires s'imposent comme de purs paradoxes visuels, entre héritage industriel et poésie contemporaine.

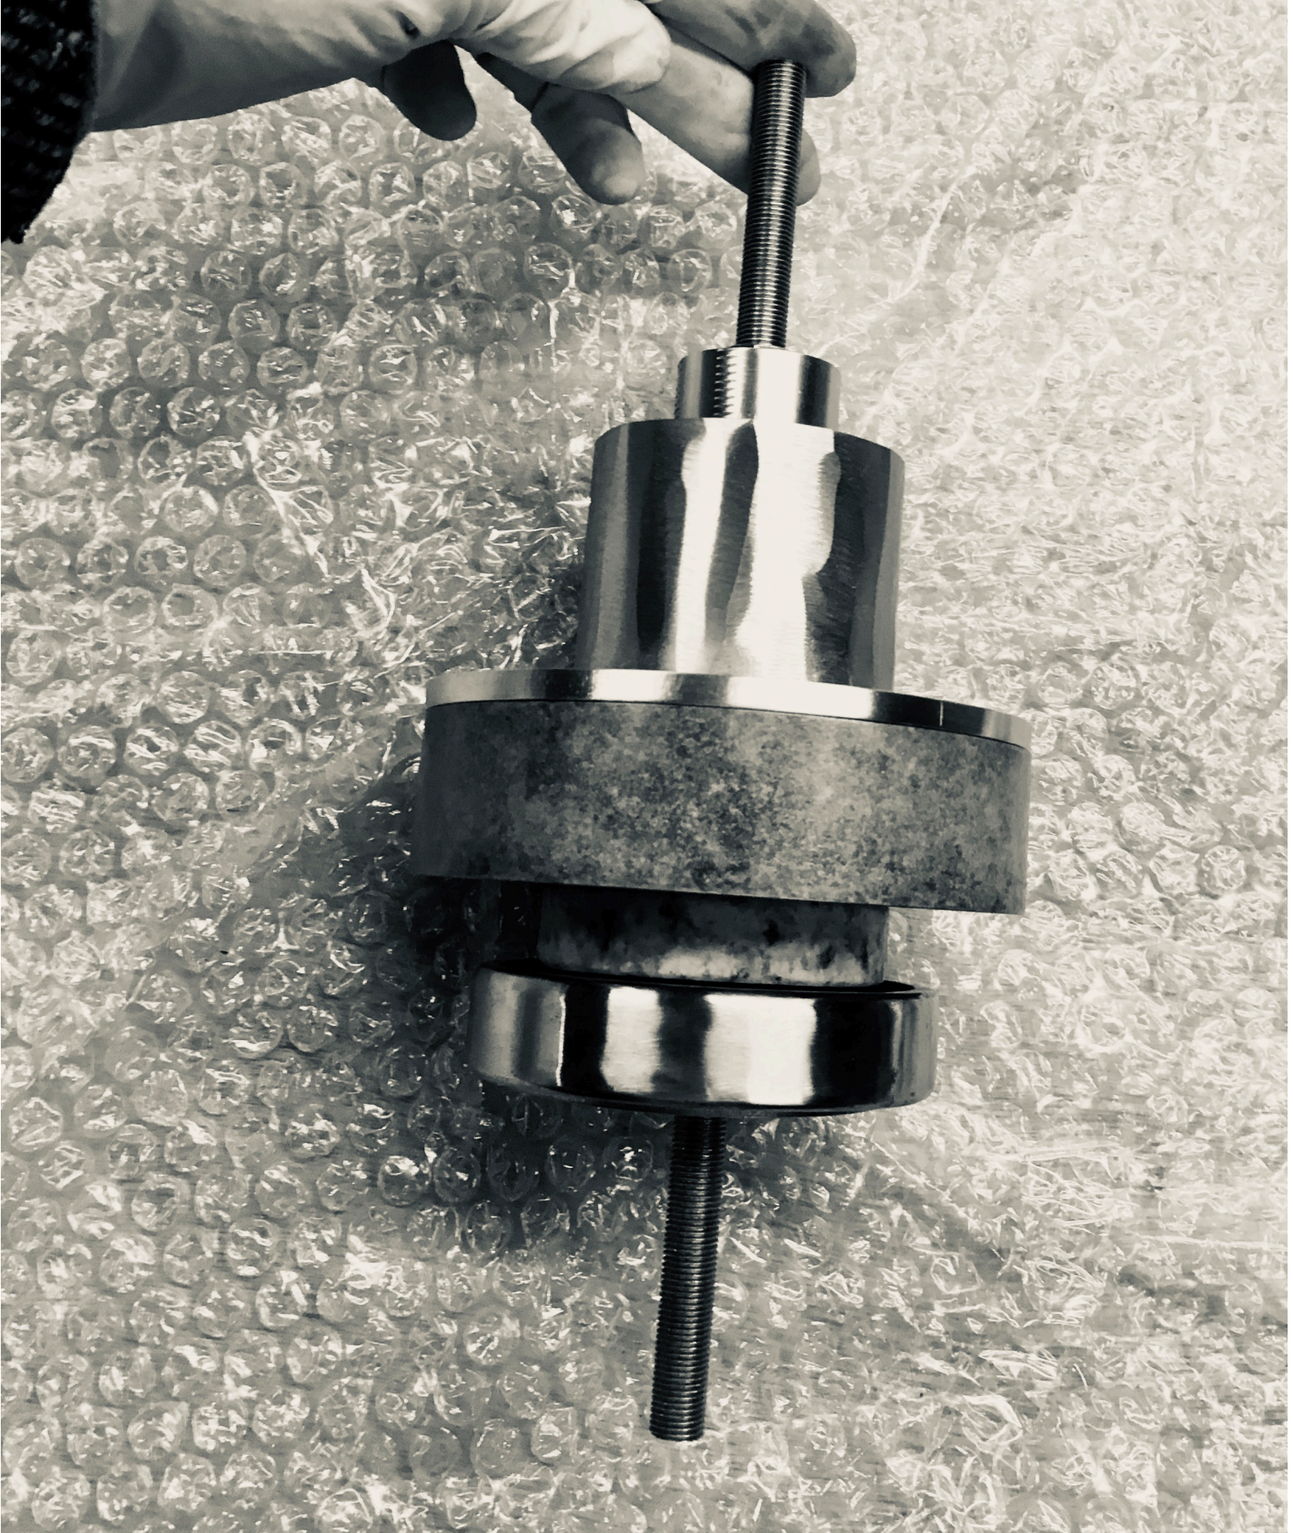

—

The aesthetic vocabulary of Marine Breynaert's luminary art is comprised of raw lines, industrial machined parts, combined with noble materials and high quality craftmanship know-how. She combines gold, marble and riveting metal pieces to create demanding light compositions that borrow from architecture, industrial design, constructivism and a revival of art deco.

All the elements are sourced and worked in Europe, in collaboration with specialized craftsmen. The finishes are carried out at the studio in Fontainebleau.

From the contrast between the delicacy of the materials and the raw lines of the industry, Marine Breynaert has combined her various heritages and original, empowering style to create her extraordinary and stunning collections. Her luminescent works of art are pure visual paradoxes between our industrial heritage and a sense of contemporary poetry.

Au départ de chaque objet, il y a une recherche : l'upcycling d'une part, puisque la récupération de pièces industrielles non usitées était au fondement des premières créations ; mais aussi la recherche technique et presque scientifique qu'impose la juxtaposition de certains éléments.

—

At the Beginning of the creation of each object, there is a research: upcycling on one hand, since the recovery of unused industrial parts was at the basis of her first creations; but also, the technical and almost scientific research required by the juxtaposition of certain elements.

Les luminaires et les arts décoratifs de MB se réclament de la rareté d'autrefois : le temps où l'on avait peu d'objets, faits manuellement, et qui duraient une vie. L'intemporalité des lignes permet ce temps long : les objets ne suivent aucune mode, aucun genre. Il n'y a pas de collections annuelles chez Marine Breynaert : seuls le temps de la bonne trouvaille, la noblesse des matériaux et la complexité de leur façon.

—

The lighting and decorative arts of Marine Breynaert draw on the rarity of yesterday: the days when there were few objects, made by hand, and which lasted a lifetime. The timelessness of the lines: the objects follow no fashion, no genre. There are no annual collections at Marine Breynaert: only the time of a good find, the nobility of the materials and the complexity of their way.
